KORKLEDER

Cuir de liège | Cork leather

310 g/m²

D: Ein modern verarbeitetes, hochwertiges Naturprodukt, welches glatt und anschmiegsam und gleichzeitig robust ist. Somit ist efco creative Korkleder eine echte vegane Alternative zu Leder. Die Haptik des Materials ist faszinierend und fühlt sich – bedingt durch den hohen Isolationswert – weder kalt noch zu heiß an. Die Oberfläche besteht aus echtem Naturkork und ist als nachwachsender und wiederverwertbarer Rohstoff auch ökologisch sinnvoll. Kork benötigt im Gegensatz zu Leder keine aufwändige Bearbeitung mit umweltschädlicher Chemie. Bestens geeignet für Kissen, Sitzpolster, Handtaschen, Taschen, Rucksäcke, Schmuck, Gürtel, Clutch-Taschen, Platzsets mit Bestecktaschen, Geldbörsen, Handy- und Smartphonehüllen, etc. Hochwertige Profiqualität, 0,65 mm stark, Flächengewicht ca. 310 g/m², reißfest und robust. Korkleder kann mit einer Jeansnadel problemlos genäht werden oder mit lösungsmittelhaltigen Klebern (UHU Kraft oder ähnlich) im Kontaktklebeverfahren verarbeitet werden. Schonende Handwäsche ist möglich. Da Kork von Natur aus wasser- und schmutzabweisend ist kann das Material ebenfalls problemlos feucht abgewischt werden. efco creative Korkleder besteht aus 19% Kork, 19% Polyester, 28% Baumwolle, 34% Polyurethan (PUR). Hergestellt in Europa!

F: Un produit naturel de grande qualité, dont la technique de fabrication moderne préserve ses propriétés: il est lisse, souple et robuste à la fois. Le cuir de liège commercialisé par efco creative constitue donc une véritable alternative végétalienne au cuir. Grâce à ses propriétés isolantes, ce tissu fascinant n'est ni trop chaud, ni trop froid au toucher. Sa surface est en liège véritable, une matière recyclable et renouvelable et sa fabrication s'inscrit dans une démarche écologique. De plus, contrairement au cuir, le liège est produit sans utiliser de produits chimiques polluants. Il convient parfaitement pour la confection de coussins, revêtements de banquette, sacs à main, pochettes, sacs à dos, ceintures, portefeuilles, pochettes pour portable ou smartphone etc. Le cuir de liège commercialisé par efco creative est de qualité supérieure et professionnelle, d'une épaisseur de 0,65 mm et d'un grammage de 310g/m² environ, il se caractérise par sa résistance et sa robustesse. Le cuir de liège peut être cousu en utilisant une aiguille adéquate, ou collé avec une colle avec solvant (type Uhu Kraft). Un lavage délicat à la main est possible, le liège étant naturellement imperméable et peu salissant, il est préconisé de passer un chiffon humide pour l'entretenir. L'envers du matériel est constitué d'un mélange de fibres en tissus et polyester. Le cuir de liège se compose de 19% de liège, 19% de polyester, 28% de coton, 34% de polyurethane (PUR). Produit fabriqué en Europe!

GB: Thanks to modern technology, cork has been reconstituted to form a soft, supple and hard-wearing natural leather alternative. It has a wonderful texture and thanks to the inherent insulating properties of cork, is always pleasant to the touch – neither too hot, nor too cold. Cork leather is made from genuine cork and is a renewable, recyclable raw material that is kind to the environment. Cork, unlike leather, is prepared without the need for complex processing or the use of environmentally harmful chemicals. Perfect for pillows, cushions, handbags, bags, backpacks, jewelry, belts, clutches, place mats, wallets, mobile and smartphone cases, etc. High-quality professional quality 0.65 mm thick. Weight approx 310 g/m², tear-resistant and hard wearing. Cork leather can be sewn easily or glued with a solvent based adhesive: we recommend 1945040 UHU – KRAFT. Gentle hand wash only. Cork is naturally water resistant, so light soiling can be easily removed with a damp cloth. efco creative cork leather consists of 19% real cork, 19% polyester, 28% cotton, 34% polyurethane (PUR). Made in Europe!

Mosaix-Fix:

Water-based glue for mosaic stones, weatherproof
For use on wood, metal, glass, plastics, ceramics, leather, etc.

Instructions:

Cut off or pierce the plastic nozzle and apply directly from the bottle. Apply a blub of glue directly onto the mosaic tile, place the stone on the chosen object and press on lightly. Ensure that the gaps between tiles are at least 1 to 2 mm wide. Mosaix-Fix can also be used on larger areas using a paintbrush. Brush on a layer of glue approx. 1 mm thick. Work in stages when mosaicing larger areas. If applying mosaic to vertical surfaces, lay the object on it's side so you can work on a flat surface. Leave to dry, then mix grout and apply evenly with a spatula. Remove excess with a sponge. Clean tools with soap and water.

Schrumpffolie

Plastique fou | Shrinking foil | Foglio termoretraibile

D: Mit Schrumpffolie können Sie Schmuckteile, Accessoires oder auch plastische Objekte herstellen. Schrumpffolie ist ein Werkmaterial das durch Erhitzen – z.B. im Backofen – schrumpft. Dabei verkleinert es sich um ~ 50%, gleichzeitig wird es dicker und fester.

F: Pour la réalisation d'accessoires pour bijoux, de pièces et d'objets plastiques. Ce film plastique est un matériau qui a la propriété de se rétracter sous l'action de la chaleur (d'un four par exemple). Sous l'action de la chaleur, ce matériau rétrécit de 50% environ et durcit tout en s'épaississant.

GB: With shrinking foil you can make pieces of jewellery, accessories or also three-dimensional objects. Shrinking foil is a material which shrinks when heated - e.g. in an oven. It is reduced by ~ 50%, and at the same time it becomes thicker and firmer.

IT: Con il foglio termoretraibile si possono realizzare articoli di bigiotteria, accessori di moda oppure oggetti plastici. Il foglio termoretraibile è un materiale che si ritira quando è esposto a una fonte di calore, ad es. in forno. Il foglio si ritira fino a circa il 50% della dimensione iniziale, diventando più spesso e più compatto.

D: Bearbeiten Sie Ihre Schrumpffolie mit Schere, Cuttermesser oder Motiv-Stanzern. Mit einer Lochzange können Sie - z.B. für Halskette oder Schlüsselanhänger - Löcher oder angeordnete Lochmuster einarbeiten. Diese sind nach dem Schrumpfen ebenfalls kleiner. Gestalten Sie die Schrumpffolie auf der angerauten Seite mit Faser- und Buntstiften oder bestempeln diese mit Stempelfarben. Lassen Sie danach die eingesetzten Farben abtrocknen. Die Farbtöne werden beim Schrumpfen intensiver und leuchtender. Zum Schrumpfen das fertigestellte Werkstück mit der bearbeiteten Seite nach oben auf Backpapier legen und in einem auf ~120°C erhitzten Backofen legen. Der Schrumpf-Vorgang dauert ca. 2-3 Minuten, beginnt mit dem Verbiegen der Schrumpffolie und endet, wenn diese sich wieder begradigt hat. Ihr Werkstück können Sie im heißen Zustand noch verformen, für flache Teile die Schrumpffolie mit leichtem Druck glatt pressen.

F: Découper le film plastique au ciseau, au cutter ou à la perforatrice. Par ailleurs, vous pouvez réaliser à l'aide d'une poinçonneuse des perforations alignées ou des percements isolés -pour façonner des chaînettes et des portes-clés à titre d'exemple- . Ne perdez pas de vue que ces perforations vont également rétrécir sous l'action de la chaleur. Seule la face mate peut être mise en couleur avec des crayons de couleur, des feutres de couleur, des peintures sur tampon. Après application, laisser sécher les couleurs. Lorsque le film plastique se rétracte sous l'effet de la chaleur, les couleurs augmentent en intensité et en luminosité. Lorsque votre réalisation est finie, poser la feuille côté mat vers le haut sur du papier sulfurisé et mettez votre plaque au four préchauffé à 120°C environ. Le processus de rétractation dure environ 2-3 minutes : le matériau se déforme dans un premier temps puis reprend son aspect initial qui indique que le processus est alors terminé. Votre objet restera encore malléable aussi longtemps qu'il est chaud. Si votre réalisation est plane, aplatissez le film plastique en exerçant de légères pressions.

GB: Work the shrinking foil with scissors, a cutting knife or motif punches. With a hole punch you can work in holes or arrange hole patterns – e.g. for necklaces or key rings. The holes also become smaller after shrinking. Embellish the shrinking foil on the rough side with felt-tip pens or crayons or stamp it with stamping colours. Then leave the colours to dry. The colours will become brighter and more intensive during shrinking. To shrink the piece you have created, place it on baking paper in a preheated oven at ~120°C with the decorated side facing upwards. The shrinking process takes approx. 2-3 minutes. It starts when the shrinking foil rolls up and ends when it has become flat again. You can shape your creation while it is still hot. To make flat pieces press the shrinking foil lightly to make them even.

IT: Lavorare il foglio termoretraibile con le forbici, con il taglierino (cutter) o con fustelle decorative. Con una pinza perforatrice vi si possono praticare fori o disegni traforati, ad es. per realizzare collane o portachiavi. Dopo il ritiro termico anche i fori risulteranno più piccoli. Decorare il foglio termoretraibile sul lato irruvidito con colori (penne a feltro e matite colorate idrosolubili) o con inchiostri per timbri. Far essiccare i colori applicati. Durante la termoretrazione i colori diventano più intensi e più brillanti. Per ottenere la termoretrazione, posare l'oggetto finito con il lato lavorato rivolto verso l'alto su un foglio di carta da forno e porlo nel forno riscaldato a 120 °C circa. La termoretrazione dura 2-3 minuti circa, inizia con la deformazione del foglio termoretraibile e finisce quando esso si sarà raddrizzato. Si può modellare l'oggetto finché è ancora caldo, per ottenere oggetti piatti spianare e lisciare il foglio termoretraibile esercitando una lieve pressione.

Tyvek® information on properties, possible applications and ways of working with it.

PROPERTIES:

Tyvek® is a spun bond material, made of 100 % polyethylene fibres. It is much more lightweight than traditional materials of a similar strength. Soft Tyvek® has a textile character, the stiff material can be compared to strong Japanese paper as far as the look and the textures are concerned. Depending on the type, it can be folded and unfolded almost endlessly and resists very well to abrasion. Tyvek® is tear-proof, in both a wet or dry state. Unlike paper, it is very weather proof, suitable for outdoor use and to a certain extent is UV resistant. Tyvek® can be used at temperatures between -75 °C and + 75 °C and is resistant to a wide range of chemicals. As a pure PE product, it is most suitable for recycling. If disposed of at a landfill, it does not have any detrimental effect on the groundwater.

POSSIBLE APPLICATIONS:

Tyvek® has successfully proved itself for making room dividers or kites, lampshades, decorations, templates as well as for stylish or protective clothing.

WAYS OF WORKING WITH IT:

Tyvek® can be cut, punched, stitched, laminated and sewn just like paper or fabric. For gluing at specific points, cyanoacrylate adhesives / superglues are particularly suitable. For larger areas, use a contact adhesive such as Pattex®, a dispersion adhesive such as Ponal® or a spray adhesive. It is possible to print on Tyvek® using all conventional methods; it is not suitable for photocopiers or laser printers. Use felt-tip pens and classical acrylic paints for painting on it. To iron Tyvek®, lay a moist cotton cloth on it and iron it at the temperature for – silk -. We recommend trying out all applications and making samples first.

Art Transfer

Acrylic pictures painted in no time at all – With the new method for transferring motifs it is child's play even for beginners: Simply print out – rub on and apply paints. In this way fantastic pictures are created.

Print the desired motif in black onto the transfer paper using an ink-jet printer. Before transferring, a support should always be placed underneath the canvas at the exact place, where the painting is to be done. For this purpose push an aluminium sheet (creative set 18 033 00) under the stretched canvas with the flat side between the frame and the canvas, so that the angled part of the sheet is showing upwards. Turn the stretched canvas frame over and lay the printed transfer paper onto it with the printed side downwards. Then rub over the back of the paper over the area where any lines are. This works best, if the transfer tool (18 033 01) is used to press directly. If whole areas are to be transferred, it is advisable to work in alternating directions. If the motif is secured with adhesive strips only at the top or at one side, then it is possible to check whether the quality of the lines to be transferred is satisfactory. The adhesive strips on the back of the paper are of no importance when transferring, simply rub over them. Only black printing ink is transferred to the canvas. The motif can also be transferred on the following day. When the motif has been transferred exactly, remove the paper with the motif from the stretched canvas frame and start painting.

TESSUTO

With motif-felting you can transfer a selected motif from a serviette onto a variety of surfaces and felt it into a three-dimensional motif. You can apply this technique for decorating fabrics, felting, non-woven fabrics, curtains, stretched art canvas, lampshade covers or pieces of clothing. The felting wool is felted with the surface to which it is to be attached to make a decorative picture.

5. You have now created a coloured felt appliqué article. You can now put it onto a variety of surfaces, which, however, should be suitable for working with felting needles. For this purpose, with scissors cut the felt hairs standing out at the back to a length of approx. 2 mm. Then you can iron on the appliqué article with non-woven iron-on fabric cut to fit exactly to various surfaces and, if necessary, work these with a felting needle (art no. 21 235 03).

1. Cut out the motif selected from a serviette roughly with scissors and pull the upper printed layer off.
2. Place this on the rough side of the iron-on non-woven fabric (art. no. 93 153 22). Cover the serviette with baking paper and iron it onto the iron-on non-woven fabric at a suitable temperature (iron setting ~ 3). Then cut out the desired motif to fit exactly.

3. Pull off the lower protective paper from the non-woven fabric and iron the motif onto the non-woven fabric for motif felting (art. no. 10 083 15).

4. Then place the piece to be worked onto the work surface for felting (synthetic foam block art. no. 10 083 05) und secure it at the sides with pins. Now put small pieces of the felting wool (wool for felting art. no. 10 080 01-99 or super fine Merino wool tops (art. no. 10 085 01-10 086 07) in matching colours onto the article to be worked. Make it firmer with the help of a felting needle (art. no. 21 236 32) by felting the loose felting wool at close intervals on the work surface. Important: Only put the needle so far into the work surface so that it does not come out on the other side. During this felting process you can also achieve colour combinations by laying more felting wool colours next to and on top of one another. Felting must be carried out to just over the edges of the motif. The felting wool must be felted until the surface has become firm enough. When you have finished, pull the felted article off the work surface.

Transfer Foil

35 344 .. Transfer Foil, 10 cm x 122 m SQ: 1 pc

35 345 .. Transfer Foil, 10 x 15 cm  SQ: 5 pc

With this transfer foil you can decorate candles and wax sheets. Lay the transfer foil with the shiny side upwards (onto a wax sheet laid on a flat work surface or directly onto the candle). Write or paint on the transfer foil with a ball-point pen or another hard object. The metallic coating is transferred onto the surface at the points where you have drawn on the foil. Carefully remove the transfer foil from the wax sheet or the candle. The metallic coating has been transferred. Cut the decorated wax sheet to size and lay it on the candle. You can protect the candle by applying Candle Varnish (art. no. 93 169 02).

42 511 12 Scor-Pal® mat, Inch, 30 x 30 cm   SQ: 1 pc

Scor-Pal® has all the grooves you will need to score your cardstock projects accurately and quickly, providing a precise, crisp fold. One of the key benefits of Scor-Pal is the ability to score multiple score lines at the same time, without moving the cardstock. With the Scor-Pal, it is possible to make intricate cards, grid and reverse grid cards, gate fold cards, accordion folds, brochure/flyer score lines, boxes, origami, iris foldings and more.

Instructions:

Place Scor-Pal on a flat surface with ruler at the top. Place cardstock right side up on Scor-Pal surface. Align cardstock to top and left fences of the Scor-Pal. There are notches at each score line, to show you where the groove begins. Hold the scoring tool in the same manner as you would hold a pen or pencil, not on its point. Use the edge of the tool to create your score as the point may damage the cardstock. Score down the groove with a steady, firm, even pressure. If you are embossing (using the raised bump for decorative purposes) you may want to score the same line twice. Always fold with the indentation on the outside and the bump on the inside of the fold. This is called a mountain fold. Use the flat edge of the tool to further flatten the fold (commit the crease) for a smooth, perfect fold every time.

TIP: Use the left and top fences to line up the open corners of the cardstock before committing the crease.

Wer seine Träume
verwirklichen will,
muss erst
mal aufwachen.

Ich habe keine Macken!
Das sind Special-Effects!

Wer will,
zucht Wege,
wer nicht will,
zucht Gründe.

Neid ist die höchste Form
der Anerkennung!

EFCOLOR

Collagen aus Alu-Teilen

Collages de pièces en alu / Collages from aluminium pieces

EFCOLOR – Farbschmelzpulver zum effektvollen Gestalten von Metall, Glas, Holz, Porzellan, Keramik, Stein, sowie anderen Materialien, erhitzen bis 180 °C. Schmilzt und härtet bei 150 °C auf der Herdplatte, im Backofen oder auf dem EFCOLOR-Ofen mit Teelichtern.

Mit den Collagenteilen aus Aluminium in Verbindung mit EFCOLOR lassen sich kunstvolle Dekorationen gestalten. Die Collagenteile können miteinander kombiniert werden, so entstehen kunstvolle Unikate. Für größere Collagenteile empfehlen wir EFCOLOR in der 25 ml Dose mit dem passenden Siebaufsatz zu verwenden. So lassen sich die Flächen gleichmäßig bestreuen. Der dreidimensionale Effekt entsteht durch Verwendung von doppelseitigen Klebekissen und Abstandsklebeband. So entstehen durch Aufkleben der verschiedenen Elemente in unterschiedlichen Höhen weitere interessante Effekte.

Efcolor – poudre colorée pour émaillage de métaux, de verre, de bois, de porcelaine, de pierre et bien d'autres matériaux jusqu'à 180°C. Elle fond et durcit sur la plaque de cuisson, dans le four ou dans l'élément de cuisson Efcolor chauffé par des bougies.

De superbes décorations uniques peuvent être conçues avec des collages de pièces d'aluminium travaillées avec la poudre Efcolor.

Nous conseillons de prendre de l'Efcolor en 25 ml avec les tamis correspondants pour des pièces dont les surfaces seraient plus importantes pour permettre un saupoudrage uniforme. L'effet 3D est obtenu en utilisant des coussinets adhésifs et du double-face épais.

EFCOLOR – coloured enamelling powder for striking creations in metal, glass, wood, porcelain, ceramics, stone, as well as other materials, can be heated up to 180 °C. Melts and hardens at 150 °C on a cooker hotplate, in the oven or on the EFCOLOR stove with tea lights.

By taking the aluminium collage blanks together with EFCOLOR fancy decorations can be created. The collage pieces can be combined with one another to make unique artistic objects.

For larger collage blanks we recommend using EFCOLOR in the 25 ml tin with the corresponding sieve top. In this way the surfaces can be sprinkled evenly. The three dimensional effect is made by using double-sided adhesive pads and thick adhesive tape. By sticking the various elements at different levels further interesting effects can be achieved.

**Step 1**

Vorderseiten der Aluteile mit Schleifblock reinigen.

Poncer la face qui sera saupoudrée.

Clean the front of the aluminium blanks with the abrasive block.

**Step 2**

Teile gleichmäßig deckend mit EFCOLOR-Farbschmelzpulver bestreuen.

Saupoudrer les surfaces uniformément avec de l'Efcolor.

Sprinkle the blanks with an even coating of EFCOLOR coloured enamelling powder.

**Step 3**

Teile auf die Brennpfanne legen.

Poser les pièces sur la plaque de cuisson.

Place the pieces on the firing plate.

**Step 4**

In den vorgeheizten Backofen stellen. Wir empfehlen Unterhitze!

Déposer la plaque de cuisson avec les pièces dans le four chauffé au préalable. Nous conseillons un four qui chauffe par le bas.

Place in the preheated oven. We recommend using bottom heat.

**Step 5**

Nach 3-5 Min. aus dem Ofen nehmen. Vorsicht heiss! Abkühlen lassen.

Sortir la plaque et les pièces du four après 3 à 5 minutes. Prudence c'est chaud ! Laisser refroidir.

After 3-5 mins remove from the oven. Caution hot! Leave to cool down.

**Step 6**

Den Keilrahmen mit Decoupaint new grundieren. Trocknen lassen.

Recouvrir la toile de peinture Decoupaint et laisser sécher.

Apply a base coat of Decoupaint new to the stretched canvas. Leave to dry.

**Step 7**

Die Collagenteile mit Klebekissen (doppelseitig) montieren. Wackelaugen mit Dekofix-Dekokleber aufkleben.

Faire le montage finale des pièces alu émaillées en les fixant avec des coussinets adhésifs double-face. Coller les yeux avec de la colle Dekofix.

Fix the collage pieces with adhesive pads (double-sided). Glue on the wobbly eyes with Dekofix Deko glue.

Chamotted Modelling Clay, chamotted 25 % 0 – 1 mm:
Professional clays with a wide range of uses, suitable for all modelling techniques and for small to medium sized pieces. With the exception of clay 6s all clays can be combined with one another, whether for the insertion technique or the marbling technique. Due to the special careful preparation of the natural clays they are so plastic, that with a little practice they can also be turned on the potter's wheel (e.g. for thick-walled plant containers). When clays 42 053 86 and 42 053 88 are fired in the range of the given highest temperature, frostproof ceramic ware can be produced.

42 054 02 – Fibre Clay

This clay is interspersed with extremely fine textile fibres. It can be finely modelled, whereby the fibres form a supportive structure in the drying process, which gives the unfired clay an unusual degree of stability even with filigree work. Please note that it is natural for the textile fibres to develop smoke during ceramic firing and that the kiln must have an extractor system.

Special-Plate Clays, chamotted with 40 % 0 – 0.5 mm, up to 1,150 °C
 These clays are especially designed for making plates, i.e. for building up vessels using the plate technique. However, they are also suitable for all the usual building-up techniques.

Building-up Clay, chamotted, 0 – 2 mm
 The clay is especially suitable for large pieces.

42 054 06: This clay catches the eye through the interplay of colours. At 1,000 °C it fires to a lilac colour, then at higher firing temperatures, it changes to beige-ochre-brown. At firing temperatures starting at 1,250 °C the colour of the fired piece changes, the corners and edges take on dark coloured contours.

 The clay is suitable for medium-sized pieces using all the usual building-up and modelling techniques.

42 053 87: Building-up and modelling plate clay which fires white. This clay can be fired at a higher temperature than the special plate clays. Due to its resistance to thermal shock, it is especially suitable for the RAKU-technique. Since the clay mixture used has particularly good plastic properties, it can also be used on a potter's wheel (e.g. for RAKU-vessels).

Softplast

19 223 01 Softplast, air-hardening, 250 g SQ: 2 pc

Softplast:

Softplast is a super light, air-hardening modelling clay. This ready for use natural product is safe to use and nonirritant. Use only the amount that you need and once opened, Softplast will keep for several days if stored in an airtight container. Knead for a few minutes to soften. Softplast works well on surfaces such as polystyrene, wood, glass, ceramics or plastics and is ideal for building projects. The surface becomes touch-dry in the air within minutes. Drying time depends on the atmosphere and the thickness of the project but should take between 1-2 days. If Softplast is dried out too quickly (i.e. in the oven) cracks may appear. The completed project may be filed, drilled, painted and varnished as desired (Decoupaint is an ideal water based paint to use.)

About Royal Soapstone

Royal Soapstone is a very soft and compact stone that has minimum 70% of mineral talc on its composition. The stones are mined at legalized quarries at the state of Minas Gerais, Brazil, one of the richest mineral areas in the world – the famous “iron quadrangle”. After mined, the stones are forward to a production plant, where they are washed with high pressure water, selected and sorted by color and size. Only the first quality soapstone is used. Because of the possibility that the mineral talc can be mixed together with other minerals we can find a range of colors and different textures of Royal Soapstone. That makes Royal Soapstone perfect for carving, modeling and shaping. That’s also the main reason why Brazilian soapstone is considered the best soapstone for carving.

General Benefits of Soapstone

easy to maintain, Non-reactive to acids and chemicals, does not harbor bacteria, completely non porous and extremely dense, needs no man-made sealers, durable for generations, soft to the touch, yet strong, warm matte finish, comfortable in any décor, can be repaired easily

Color-Dekor 180° C

94 080 .. Color-Dekor 180 °C, 100 x 200 mm, 2 pieces

SQ: 5 bag

Decorative foil for creating unique designs on ceramics, glass, metal, etc. Can be cut with punches, scissors or a scalpel, or even torn for an interesting texture effect.

Hardens in the oven in 30 minutes at 180° C.

Color-Dekor 180° C can be applied to heat-resistant materials like porcelain, ceramics, glass, metal, etc. Place the cut shape in water for a few seconds, slide the Color-Dekor foil from the backing paper onto the plate and smooth it down with your fingers, working outwards from the centre. Remove any moisture with kitchen towel. Allow to dry for 24 hours before hardening in the oven.

Important: place your work in a cold oven; heat up the oven to 180° C, then time for 30 minutes. Switch off the oven and do not remove from the oven until cold. Color-Dekor can be washed by hand with washing-up liquid

Important: The surfaces must be free of dust and grease. Use a cutting board when working with a scalpel. Any air bubbles or moisture between the working surface and the decorative foil must be completely removed to avoid unevenness after baking. Different motifs can be layered one on top of another. Please note that the first layer must be completely dry before the second layer is applied. Here again all moisture must be thoroughly removed.

You can make Color-Dekor 180° C even more attractive using StazOn.

With this medium, a real antique look can be achieved. Apply a layer of anti-queing medium. Rub in lightly with a soft cloth. Start in the centre and work your way to the edge; in this way the edges become darker than the centre. Mistakes can be corrected with a damp cloth. The anti-queing medium can be used as a basic layer on unvarnished wood. Lighter effects can be achieved by thinning down with water.

MARTHA STEWART

I'm so excited to share the launch of my new premium-quality craft paints from Martha Stewart Crafts™—the first multi-surface craft paints available! A patented formula means you can use the same bottle of paint for all your fabric, wood, glass, ceramic, plastic, and metal craft projects, and save the time and money you'd normally spend buying different paints for all these materials. Finally, one paint works on all surfaces.

My acrylic craft paints come in a range of beautiful colors that I just love, and five high-quality finishes: satin, high gloss, metallic, pearl, and of course glitter, inspired by our original gemstone glitter colors! We've also included specialty finishes and mediums that can make colors glow in the dark, add a snowy or crackled texture, or transform the paint into a glaze. Use the paints with my unique tools, applicators, and custom-designed stencils. There's even a useful kit that can turn the colors into easy-to-apply spray paint. All my paints and finishes resist fading and wear, are ideal for indoor or outdoor use, and even safe for dishwashers.

I love using craft paints to transform everything from curtains and pillowcases to glassware and flower pots. I think you'll have fun adding a splash of color to your crafts, too.

DECORATIVE ARTS PROGRAM
COLOR, FINISHES, AND TOOLS

Instructions for Enamelling

Real enamel - 780 °C to 850 °C - in an enamelling kiln

The workplace

The main priority for successfully achieving good enamelling is absolute cleanliness, as soiled enamel inevitably leads to faulty firing. It is advisable to place several sheets of paper on the surface on which the decoration work is to be carried out, so that any remaining enamel can then be poured back into the sprinkling container again. Although all EFCO kilns are well insulated, a considerable amount of heat arises in the area around the kiln. It is therefore advisable to place the appliance on a heat resistant surface. For this purpose you can use a firing rest, which should also always be placed in front of the kiln, and on which the hot copper pieces can be placed to cool down after firing. As a matter of course, tools should also be clean. Place them so that they are always within your reach. The workplace is essentially not the place for articles of food. The processing instructions for the different types of enamel must be followed exactly.

Preparing the metal

For the purposes of enamelling, the surface of the metal must be clean and free of any grease, so that the enamel can adhere well to the copper. Any soiling is rubbed away with a carborundum file or an abrasive block.

Decorative work

Decorative enamelling can be carried out using very many techniques. Here we want to give you an overview with some ideas and good tips. You can find further detailed instructions in the well known specialised books. Naturally you can apply any sort of enamels randomly to all sorts of shapes and then fire them, whereby attractive patterns often result. However, it is recommended to make a rough design beforehand and to determine the technique to be used, so that the area of the pattern and the colours used are well suited to the metal shape.

The sprinkling techniques

Powdered enamel is sprinkled as evenly as possible onto the piece to be enamelled directly from the sprinkling container, with a sieve tube for smaller pieces and with the sprinkling sieve for larger shapes, so that the layer of powder is approximately as thick as the copper. The surface must be covered so that no metal shines through, because if the covering is too thin, black spots appear during the firing due to scaling. If the enamel coating is too thick, it can chip off easily or it contracts considerably during firing, so that it curls up at the edges in places, which then have to be treated with the carborundum file and then patched up by re enamelling.

Convex or concave shapes

Dry enamel slides towards the middle of blanks with vertical sides. In order to prevent this, before sprinkling, we use a paintbrush to apply a thin, even layer of glue solution onto the workpiece, paying particular attention to the edges and strongly curved surfaces. When decorating, it should be ensured that the sprinkling is continuously carried out from the edge inwards, to guarantee that the coating is even. Strongly curved vessels are held in the hand at a slanting angle, so that the enamel falls as vertically as possible onto the surface. Shapes with very steep sides should be sprinkled with somewhat more powder at the edges, taking care not to use too much powder thus causing the enamel to flow off when melting. During decorating work, the workpiece is turned slowly until a complete coating of enamel has been achieved. The bottom or centre is sprinkled as a final step. Before firing, the applied glue solution must of course be fully dry, otherwise the fast evaporating liquid would cause

bubbling in the enamel.

Burn-through technique

Each enamel has different melting characteristics. We divide them into five groups ranging from soft to very hard; that means: soft enamels melt more quickly than hard ones. We can make use of these disparities when creating decorations. We sprinkle on a soft enamel as a base and a hard one on top of it. During firing, the hard enamel sinks into the soft enamel, so that after cooling down an unusual speckled decorative surface results. To achieve this burn through effect, we have to work with high temperatures in the muffle.

Firing effects

Through excessive temperatures and longer firing colour changes occur in many opaque enamels, which lead to interesting decorative effects. The colours silver grey, lime green, dark turquoise, lilac-pink become opalescent, i.e. semi-opaque. The colours lemon yellow, ivory, leaf green and white acquire a darker edge when fired sharply. Red acquires black speckles with this firing method, which is often a charming desired effect.

Glue solution technique

Glue solution is not only used as an adhesive, but it can also be used to create decorations. First of all an enamel base is fired, and after cooling, the desired decoration is painted onto the enamel layer with a paintbrush and glue solution. Now the contrast enamel is sprinkled onto the object and then knocked off again. After drying, the decoration is melted on.

Foil technique

The EFCO foils are pure gold and silver, which have been beaten by hand to become wafer thin and are produced especially for artistic enamel work. For this reason, this valuable material should be handled with particular care. Once again the workpiece is fired with an enamel base. Then with fine scissors or a razor blade – if possible after making a rough design – we cut shapes out of the foil, which should be laid between thin tissue paper for this purpose. Now we apply glue solution to the cooled enamel layer and carefully arrange the pieces of cut foil on it as desired, using tweezers or a paint brush. All larger pieces are perforated with a needle, so that the air trapped underneath can escape during firing. As soon as the glue solution is dry, the decoration is melted on briefly, so that the precious metal binds with the enamel base.

The work can be left as it is, however the surface is rather vulnerable to touch. It is more practical and in a certain way more effective, if in addition a transparent enamel is now sprinkled over the foil inlay and subsequently fired. Due to the gold or silver underneath, the decoration appears particularly shiny. The crinkling of the foils, which occurs during this process, enhances the brilliance.

Wiping technique

Different coloured enamels are sprinkled onto an enamelled base next to one another. By simply stroking over these with a dry paintbrush, the colours can be wiped into one another, so that charming motifs, half burn-through technique, half tone in tone, are created. The enamel layer can also be sprinkled with just one different colour. The contours are then wiped away with a paintbrush and very fine colour transitions are achieved. With a dampened brush you can dab out spotted patterns in the sprinkled area.

Instructions for Enamelling

Real enamel - 780 °C to 850 °C - in an enamelling kiln

Pencil drawing

With a soft pencil, black and white drawings can be carried out on a light coloured enamel base. A light enamel base is fired first of all, and after cooling this is roughened with a carborundum file. Now the graphite can adhere and the drawing can be started. Afterwards the finished workpiece becomes smooth in the kiln and the graphite is melted very briefly.

Stirring technique

The cleaned metal surface is sprinkled with a base layer of enamel. Then, with tweezers, we position different coloured enamel chips on top and place the workpiece in the kiln. As soon as the chips start to melt, we place the tip of a drawing rod in the muffle until it becomes red hot. Then, in the kiln, we stir with it through the enamel surface which in the meantime has melted through. This work must be carried out relatively quickly, so that the melted enamel does not burn too long. However, this is a very simple technique and exceptionally effective. Instead of chip enamel we can also use granular and thread enamel or enamel powder, which has been applied in little heaps with the tip of a knife. Random or specially designed decorations can be achieved as desired and as arranged.

Sgraffito technique

A base coating of enamel is fired and then enamel of a different colour is sprinkled onto it thinly. Taking the other end of a paint brush or a stylus, we now scratch a pattern of lines out of the sprinkled area and then fire the decoration. However, the lines must not be too thin, as the enamel covering can easily run together during firing. Individual decorative effects can also be achieved by using a thin eraser for the sgraffito technique. In this way the enamel is heaped up at the edges of the lines, so that a slight relief effect is produced.

Wet application

Enamel is not only sprinkled on in a dry form, but with a paintbrush or a spatula it can also be applied as a soft mixture directly onto the copper. For this purpose, the enamel is stirred to a mixture (preferably with distilled water) which is still just fluid, and to which a certain amount of glue solution has been added for shapes with vertical sides. The powder swells up in liquid, so that wet enamel should be applied rather more thickly. After application it is advisable to shake the prepared piece by cautiously knocking on the work surface. In this way, the wet enamel is distributed evenly over the surface. Any water, which rises to the surface, can be soaked up easily with a cloth or absorbent paper. When working with wet enamel, it should always be ensured that the fluid has evaporated from the enamel before firing. To do this, the workpiece is placed near the kiln. If you are in a hurry, it can also be held briefly in the hot kiln several times, until the fluid has evaporated. However, if the moisture dries too quickly, bubbles form in the enamel and these turn black during firing.

Relief technique

On an already enamelled surface, a thick mixture of enamel, to which a certain amount of glue has been added, is applied to three-dimensional ornaments, such as spirals, stars etc. and then corrected with a hook knife. After drying, a short hot firing should follow, so that the relief effect remains on the layer. If the decoration sinks down too much, a new relief is applied. For this work we recommend using hard enamels on a medium soft base.

Swinging technique

We apply our enamel mixture in little heaps next to one another over the whole object. Now we swing the workpiece around in circles with the hand, so that the enamel forms spirals in the opposite direction to the swinging. Places, where the metal still shines through, or edges, which are not covered by the enamel, are coated with wet enamel afterwards. Dry before firing. This technique is not only used with round concave dishes, but is also suitable for all other geometric shapes.

Fluid glazing effects can also be achieved with wet applications and the swinging technique on pre-enamelled, one coloured flat copper pieces, since all swinging decorations can be further developed with a thick, well moistened paintbrush. However, it is advisable to swing the workpiece again lightly as a final step, in order to soften undesired hard colour transitions.

Runny glazing

Dishes with vertical sides are enamelled with a base coat. After cooling, a thick enamel mixture of a different colour made only with glue solution is applied with a spatula at short intervals to the edges of the workpiece. During the firing process, the thickly applied enamel runs down the steep sides. With a little practice, the enamel mixture can be applied directly onto the powdered, unfired enamel so that only one firing is necessary. However, everything must be dry beforehand!

Firing temperatures

The firing temperatures for decorative enamel range between 800 °C and 900 °C, whereby the muffle becomes red hot. The melting time is about 2 to 3 minutes, depending on the size of the object. You can interrupt the firing process at any time and repeat it as often as you wish.

We wish you every success with professional enamelling techniques!

Cutting Template

Quick Start Guide:

1. First, mark the mobile phone case and closing tab on the leather and cut out with scissors.
2. Apply a thin line of adhesive (approx. 4mm wide) down the long sides of the cork leather. Leave it until it is touch dry and then squeeze the edges together and secure the with clothes pegs for at least 2 minutes. Leave the short side open for the insertion of the device
3. Glue the flap centrally on one side of the phone case. Cut about 2 cm of Velcro. Stick the fluffy part at the end of the tab and the corresponding Velcro part on the phone case at the appropriate place. Done!

TIP: The phone case can also be sewn with a jeans needle and thread. First sew the Velcro on the flap and then the flap and corresponding Velcro to the pocket with a zigzag stitch. Then sew the long sides together with a zigzag stitch.
